Northern Lights Aug 07 2021 Northern Lights is a collection of George Mackay Brown's writings on the places, people, and legends that formed his vision and his work. Throughout, his poems appear in counterpoint to his prose. A fresh look at the work and inspiration of a remarkable writer.

Following the Trail of Light Dec 23 2022 An intellectual and career autobiography by the 1961 Nobel Prize- winning chemist (for work on the path of carbon) who was Director of the Laboratory of Chemical Dynamics and later University Professor Emeritus at the U. of California, Berkeley. Annotation copyrighted by Book News, Inc., Portland, OR

The Sustainable City XV Sep 08 2021 Consisting of presented papers from the 15th International Conference on Urban Regeneration and Sustainability, the included works address various aspects of the urban environment and provide

solutions leading towards sustainability. Urban areas result in a series of environmental challenges varying from the consumption of natural resources and the subsequent generation of waste and pollution, contributing to the development of social and economic imbalances. As cities continue to grow all over the world, these problems tend to become more acute and require the development of new solutions. The challenge of planning sustainable contemporary cities lies in considering the dynamics of urban systems, exchange of energy and matter, and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems. The task of researchers is to improve the capacity to manage human activities, pursuing welfare and prosperity in the urban environment. Any investigation or planning on a city ought to consider the relationships between the parts and their connections with the living world. The dynamics of its networks (flows of energy matter, people, goods, information and other resources) are fundamental for an understanding of the evolving nature of today's cities. Large cities represent a fertile ground for architects, engineers, city planners, social and political scientists, and other professionals able to conceive new ideas and time them according to technological advances and human requirements. Coastal areas and coastal cities are an important area covered in this volume as they have some specific features. Their strategic location facilitates transportation and the development of related activities, but this requires the existence of large ports, with the corresponding increase in maritime and road traffic and all its inherent negative effects. This requires the development of well-planned and managed urban environments, not only for reasons of efficiency and economics but also to avoid inflicting environmental degradation that causes the deterioration of natural resources, quality of life and human health. These research papers put a focus on sustainability across the multidisciplinary components of urban planning, the challenges presented by the increasing size of cities, the number of resources required and the complexity of modern society.

The Motion of Light in Water Jul 06 2021 This Hugo Award–winning memoir is “a very moving, intensely fascinating literary autobiography from an extraordinary writer” (William Gibson, Nebula and Hugo Award–winning author of *Neuromancer*). With the poet Marilyn Hacker, Delany moves into a tenement on a dead-end street that the landlord reserves for interracial couples. Between playing folk music in the evenings at the same Greenwich Village coffee shop as Bob Dylan and preparing shrimp curry for W. H. Auden and Chester Khalman, who have accepted an invitation that night for dinner, Delany takes a stab at writing science fiction. This young prodigy would complete and sell five novels before he turned twenty-two! (And then have a nervous breakdown . . .) This beautifully written memoir is a testament to a neighborhood where

experimentation was a way of life. This ebook features an illustrated biography of Samuel R. Delany including rare images from his early career.

**Light Against Darkness Oct 21 2022** Light Against Darkness is comprised of articles that put on display the power and pervasiveness of dualistic thought. Dualism has proved a potent cultural tool for clarifying and ordering reality. Particularly in times of social stress and psychological insecurity, it can offer a valuable conceptual grid that provides orientation to the world and a clear sense of identity. At the same time, though, there are important questions to be asked about the social effects of binary thinking. As history amply illustrates, dualistic notions can readily be deployed to legitimate cultural demonization and to rationalize violence. At a deeper level, a dualist worldview can also obscure the possibilities to be found in multiplicity. The articles in this volume treat Dualism across a wide historical spectrum and from multiple methodological perspectives. The studies are organized around the religious and cultural contexts of Ancient Judaism and they include contributions from leading voices on ancient Persia, Israel, Greece, and Egypt. Experts on modern religious and philosophical thought not only lend context to concepts applied to the ancient world, but engage recent European and American experiments in binary thought. All of the studies contribute to a richer and more complete portrait of dualism in ancient Judaism.

**American Illuminations Jun 05 2021** How Americans adapted European royal illuminations for patriotic celebrations, spectacular expositions, and intensely bright commercial lighting to create the world's most dazzling and glamorous cities. Illuminated fêtes and civic celebrations began in Renaissance Italy and spread through the courts of Europe. Their fireworks, torches, lamps, and special effects glorified the monarch, marked the birth of a prince, or celebrated military victory. Nineteenth-century Americans rejected such monarchical pomp and adapted spectacular lighting to their democratic, commercial culture. In *American Illuminations*, David Nye explains how they experimented with gas and electric light to create illuminated cityscapes far brighter and more dynamic than those of Europe, and how these illuminations became symbols of modernity and the conquest of nature. Americans used gaslight and electricity in parades, expositions, advertising, elections, and political spectacles. In the 1880s, cities erected powerful arc lights on towers to create artificial moonlight. By the 1890s they adopted more intensive, commercial lighting that defined distinct zones of light and glamorized the city's White Ways, skyscrapers, bridges, department stores, theaters, and dance halls. Poor and blighted areas disappeared into the shadows. American illuminations also became integral parts of national political campaigns, presidential inaugurations, and victory celebrations after the Spanish-American War and World War I.

**When the Lights Went Out Aug 19 2022** Blackouts—whether they result from military planning, network failure, human error, or terrorism—offer snapshots of

electricity's increasingly central role in American society. Where were you when the lights went out? At home during a thunderstorm? During the Great Northeastern Blackout of 1965? In California when rolling blackouts hit in 2000? In 2003, when a cascading power failure left fifty million people without electricity? We often remember vividly our time in the dark. In *When the Lights Went Out*, David Nye views power outages in America from 1935 to the present not simply as technical failures but variously as military tactic, social disruption, crisis in the networked city, outcome of political and economic decisions, sudden encounter with sublimity, and memories enshrined in photographs. Our electrically lit-up life is so natural to us that when the lights go off, the darkness seems abnormal. Nye looks at America's development of its electrical grid, which made large-scale power failures possible and a series of blackouts from military blackouts to the "greenout" (exemplified by the new tradition of "Earth Hour"), a voluntary reduction organized by environmental organizations. Blackouts, writes Nye, are breaks in the flow of social time that reveal much about the trajectory of American history. Each time one occurs, Americans confront their essential condition—not as isolated individuals, but as a community that increasingly binds itself together with electrical wires and signals.

Light in Engineering, Architecture and the Environment Jun 24 2020 The Wessex Institute of Technology has for years been convening conferences on sustainable architecture and planning, design in nature, heritage architecture, and environmental health. With the growing importance of lighting in the creation of better, healthier environments, the enhancement of heritage architecture, and the recovery of urban areas, as well as new developments in more sustainable lighting it became clear that a conference focusing on lighting issues would be useful. This book contains the papers to be presented at the first International Conference on Lighting in Engineering, Architecture and the Environment, discussing the latest developments in a variety of topics related to light and illumination, from its engineering aspects to its use in art and architecture and the effect of light on living systems and human health. Ranging from discussions of technical issues regarding equipment design and light measurement to human perception of light and the effect of light on human health, the book will be of interest to architects, planners, environmental health experts, and stage designers in academia, industry and government, as well as colleagues discussing the latest developments in a variety of topics related to light and illumination, from its engineering aspects to its use in art and architecture and the effect of light on living systems and human health.

*Seeing the Light* Jan 20 2020 Samuel Schuman examines the place of religious colleges and universities, particularly evangelical Protestant institutions, in contemporary American higher education. Many faith-based schools are

flourishing. They have rigorous academic standards, impressive student recruitment, ambitious philanthropic goals, and well-maintained campuses and facilities. Yet much of the U.S. higher-education community ignores them or accords them little respect. Seeing the Light considers, instead, what can be learned from the viability of these institutions. The book begins with a history of post secondary U.S. education from the perspective of the religious traditions from which it arose. After focusing briefly on nonevangelical institutions, Schuman next looks at three Roman Catholic institutions—the College of New Rochelle, Villanova University, and Thomas Aquinas College. He then profiles evangelical colleges and universities in detail, discovering the factors contributing to their success. These institutions range from nationally recognized to little known, from rich to poor, with both highly selective and open admission requirements. Interviews with key administrators, faculty, and students reveal the challenges, the successes, and the goals of these institutions. Schuman concludes that these schools—Baylor University, Anderson University, New Saint Andrews College, Calvin College, North Park University, George Fox University, Westmont College, Oral Roberts University, Northwestern College, and Wheaton College—and others like them offer important and timely lessons for the broader higher-education community.

History of the Principle of Interference of Light Apr 27 2023 The controversy between the wave theory and the emission theory of light early in the nineteenth century has been a subject of numerous studies. Yet many issues remain unclear, in particular, the reasons for rejecting Young's theory of light. It appears that further progress in the field requires a better grasp of the overall situation in optics and related subjects at the time and a more thorough study of every factor suggested to be of importance for the dispute. This book is intended to be a step in this direction. It examines the impact of the concept of interference of light on the development of the early nineteenth century optics in general, and the theory of light, in particular. This is not a history of the wave theory of light, nor is it a history of the debate on the nature of light in general: it covers only that part of the controversy which involved the concept of interference. Although the book deals with a number of scientists, scientific institutions, and journals, its main character is a scientific concept, the principle of interference. While discussing the reasons for accepting or rejecting this concept I have primarily focused on scientific factors, although in some cases the human factor is examined as well. The book is a revised Ph. D. dissertation (University of Minnesota, 1984) written under Alan E. Shapiro.

Northern Lights Mar 22 2020 A stunning debut novel set in the late 1990s—“a powerful depiction of the currency of intolerance and addiction in one small town” (Kirkus Reviews)—about an androgynous youth who arrives in Minnesota, searching for the mother who abandoned him as a child. On a clear morning in the summer of 1997, Shane Stephenson arrives in Holm, Minnesota, with only a

few changes of clothes, an old Nintendo, and a few dollars to his name. Reeling from the death of his father, Shane wants to find the mother who abandoned him as an adolescent—hoping to reconnect, but also to better understand himself. Against the backdrop of Minnesota’s rugged wilderness, and a town littered with shuttered shops, graffiti, and crumbling infrastructure, Holm feels wild and dangerous. Holm’s residents, too, are wary of outsiders, and Shane’s long blonde hair and androgynous looks draw attention from a violent and bigoted contingent in town, including the unhinged Sven Svenson. He is drawn in by a group of sympathetic friends in their teens and early twenties, all similarly lost: the reckless, charming J and his girlfriend Mary; Jenny, a brilliant and beautiful artist who dreams of escaping Holm; and the mysterious loner Russell, to whom Shane, against his better judgment, feels a strange attraction. As Sven’s threats of violence escalate, Shane is forced to choose between his search for his mother, the first true friendships he’s ever had, and a desire to leave both his past and present behind entirely. “A cross between two of the greats in those categories: *The Outsiders* by S.E. Hinton, and *Jesus’ Son* by Denis Johnson” (Star Tribune, Minneapolis), Raymond Strom’s *Northern Lights* presents an unforgettable world and an experience often overlooked, with a new kind of hero to admire.

Under Bright Lights Mar 26 2023 Gay-friendly dance clubs, upmarket bars, and party circuits—such commercial venues evoke the image of a gay globe, but what happens when they are bound to a landscape of disorder, mass poverty, and urban decay? Vividly describing this world of contradictions through the prism of twenty-first-century Manila, *Under Bright Lights* challenges popular interpretations of the “third world queer” as a necessarily radical figure. Drawing on ethnographic research, Bobby Benedicto paints a remarkably counterintuitive portrait of gay spaces in postcolonial cities. He argues that Filipino gay men’s pursuit of an elusive global gay modernity sustains the very class, gender, and racial hierarchies that structure urban life in the Philippines. Benedicto examines, for example, how practices such as driving enable the emergence of a classed gay cityscape, and how scenes of networked global cities engender discourse that positions Manila within a global system of “gay capitals.” And yet he also analyzes how the fantasy of gay globality is imperiled when privileged gay men from Manila, while traveling abroad, encounter Filipino labor migrants and come face-to-face with the exclusionary racial orders that operate in gay spaces overseas. Unique in its methodological approach, *Under Bright Lights* employs affective, first-person storytelling techniques to capture the visceral experience of Manila and gay life in a third world city.

***Screening the Body* Feb 13 2022** Moving images are used as diagnostic tools and locational devices every day in hospitals, clinics and laboratories. But how and when did such issues come to be established and accepted sources of knowledge about the body in medical culture? How are the specialized techniques and codes of these imaging techniques determined, and whose bodies are studied, diagnosed and treated with the help of optical recording devices? "Screening the Body" traces the unusual history of scientific film during the late 19th and early 20th centuries, presenting material that is at once disturbing and engrossing. Lisa Cartwright looks at films like "The Elephant Electrocutation". She brings to light eccentric figures in the history of the science film such as William P. Spratling who used Biograph equipment and crews to film epileptic seizures, and Thomas Edison's lab assistants who performed x-ray experiments on their own bodies. Drawing on feminist film theory, cultural studies, the history of film, and the writings of Foucault, Lisa Cartwright illustrates how this scientific cinema was a part of a broader tendency in society toward the technological surveillance, management, and physical transformation of the individual body and the social body. She frequently points out the similarities of scientific film to works of avant-garde cinema, revealing historical ties among the science film, popular media culture and elite modernist art and film practices. Ultimately, Cartwright unveils an area of film culture that has rarely been discussed, but which will leave readers scouring video libraries in search of the films she describes.

**Daylighting, Architecture and Health** May 04 2021 An essential read for all whose work impinges on daylighting practice, **Daylighting, Architecture and Health: Building Design Strategies** examines research into daylighting and health, and its implications for architecture and building design. On average, people spend 90% of their life indoors. This is the first book to examine the specific impact on human health of levels of natural light in buildings, bringing together a range of findings in the field into one accessible publication. Documenting medical research findings that establish the link between light quality and human health, and considering design strategies for increasing daylight in buildings, the book develops a nuanced understanding and awareness of the importance of natural light in buildings for architects and building professionals. 1. First book to explore the subject of the impact on people's health of access (or lack thereof) to natural light in buildings 2. Brings together relevant research looking specifically at its implications for architecture and architectural design 3. The book will allow the reader to gain an understanding and awareness of the importance of natural light in buildings

***Red Skin, White Masks*** Jan 12 2022 WINNER OF: Frantz Fanon Outstanding Book from the Caribbean Philosophical Association Canadian Political Science Association's C.B. MacPherson Prize Studies in Political Economy Book Prize Over the past forty years, recognition has become the dominant mode of negotiation and decolonization between the nation-state and Indigenous nations in North America. The term "recognition" shapes debates over Indigenous cultural distinctiveness, Indigenous rights to land and self-government, and Indigenous peoples' right to benefit from the development of their lands and resources. In a work of critically engaged political theory, Glen Sean Coulthard challenges recognition as a method of organizing difference and identity in liberal politics, questioning the assumption that contemporary difference and past histories of destructive colonialism between the state and Indigenous peoples can be reconciled through a process of acknowledgment. Beyond this, Coulthard examines an alternative politics—one that seeks to revalue, reconstruct, and redeploy Indigenous cultural practices based on self-recognition rather than on seeking appreciation from the very agents of colonialism. Coulthard demonstrates how a "place-based" modification of Karl Marx's theory of "primitive accumulation" throws light on Indigenous-state relations in settler-colonial contexts and how Frantz Fanon's critique of colonial recognition shows that this relationship reproduces itself over time. This

framework strengthens his exploration of the ways that the politics of recognition has come to serve the interests of settler-colonial power. In addressing the core tenets of Indigenous resistance movements, like Red Power and Idle No More, Coulthard offers fresh insights into the politics of active decolonization.

*Carnival Lights* Mar 14 2022 Minnesota Book Awards 2022 -- Finalist in Novel & Short Story "Fluid in time and place, *Carnival Lights* flows between one past and another, offering a heartbreaking portrait of multigenerational trauma in the lives of one Ojibwe family. This tapestry of stories is beautifully woven and gut-wrenching in its effect. Read it, and it may change you forever." -- William Kent Krueger, New York Times Bestselling author

Blending fiction and fact, *Carnival Lights* ranges from reverie to nightmare and back again in a lyrical yet unflinching story of an Ojibwe family's struggle to hold onto their land, their culture, and each other. *Carnival Lights* is a timely book for a country in need of deep healing. In August 1969, two teenage Ojibwe cousins, Sher and Kris, leave their northern Minnesota reservation for the lights of Minneapolis. The girls arrive in the city with only \$12, their grandfather's WWII pack, two stainless steel cups, some face makeup, gum, and a lighter. But it's the ancestral connections they are also carrying - to the land and trees, to their family and culture, to love and loss - that shapes their journey most. As they search for work, they cross paths with a gay Jewish boy, homeless white and Indian women, and men on the prowl for runaways. Making their way to the Minnesota State Fair, the Indian girls try to escape a fate set in motion centuries earlier. Set in a summer of hippie Vietnam War protests and the moon landing, *Carnival Lights* also spans settler arrival in the 1800s, the creation of the reservation system, and decades of cultural suppression, connecting everything from lumber barons' mansions to Nazi V-2 rockets to smuggler's tunnels in creating a narrative history of Minnesota. "Fluid in time and place, *Carnival Lights* flows between one past and another, offering a heartbreaking portrait of multigenerational trauma in the lives of one Ojibwe family, this tapestry of stories is beautifully woven and gut-wrenching in its effect. Read it, and it may change you forever." -- William Kent Krueger, New York Times Best Selling Author

"Chris Stark's newest novel explores the evolution of violence experienced by Native women. Simultaneously graphic and gentle, *Carnival Lights* takes the reader on a daunting journey through generations of trauma, crafting characters that are both vulnerable and resilient." -- Sarah Deer, (Mvskoke), Distinguished Professor, University of Kansas, MacArthur Genius Award Recipient

"*Carnival Lights* is a heartbreaking wonder of gorgeous prose and urgent story. It propels the reader at a breathless pace as history crashes down on the readers as much as it does on the book's vivid characters. The author's brilliant heart restores their dignity and via the realm of imagination,

brings them home." -- Mona Susan Power, author of *The Grass Dancer*, a PEN/Hemingway Winner "It's not every day that one is given an inimitable gift of truth. *Carnival Lights* is that gift. The history books that we've all read throughout time were purposely devoid of the realities of decades of Native genocide, attempts to eradicate our culture, and the horrendous effects of the boarding school era-trauma that continues to permeate the American Indian communities today. *Carnival Lights* is an opportune story of how two young girls navigate these lived experiences and provides a veracity that will reach deep into your heart, creating a newfound reflection of the actualities of this historical trauma. Chris Stark, a skilled narrative artist, once again engenders storytelling that ingeniously weaves multi-generational authenticities for not only the Native communities, but also as reflected for so many others. It's time for all of us to embrace this gift of truth." -- Deb Foster, Anishinaabe, MS-MFT Executive Director for the Ain Dah Yung Center, a meeting place for American Indian homeless youth and families "There are so many moods and story currents running through this wonder of a novel that I can attribute to individual women whose lives experiences run parallel to Stark's many characters. The two female adolescences in this novel take us to high and low heights, just like a carnival ride. It's overwhelming, irrational and dangerous, and there is no one to help, just as it has been for Indigenous people from the moment colonizers stepped foot on this continent of Turtle Island. *Carnival Lights* is powerful storytelling. Indigenous ancestors are persistently returning, so as not to be forgotten in death and memory, and Stark puts the reader right in the center of their pain and struggles." -- Mary K. Kunesh, Minnesota Senator, Standing Rock Lakota descendant, chair of Minnesota Missing and Murdered Indigenous Women taskforce "Carnival Lights is a powerful story of resilience, an emotional rollercoaster ride and an expression of the raw truth of multigenerational trauma. Sher, a lesbian and protector, or what we call 'two-spirit, ' is particularly connected with the old ways." -- Lenny Hayes, Sisseton-Wahpeton Oyate, and Two-Spirit activist "Chris Stark weaves Native spirituality throughout *Carnival Lights* from the 1960s, before the Religious Freedom Act of 1978. We will lay under a fern, waiting for a drop of water to fall from the tip of the leaf with Em, feel the freedom of fleeing abuse with Kris and get to know the protector Sher who watches over Kris like a wolf. *Carnival Lights* reminds us that we are not alone, and we are watched over by ones we would have never known or seen if it were not for this desperate moment we are in right now. Chris Stark reminds us how important our teachings are, how our memories can comfort us in our darkest hour when we need it the most. Chris draws us into the inspiration and comfort provided to the characters at times guiding their next move." -- Babette Sandman, Ojibwe elder, White Earth Nation enrolled citizen living in Duluth "Chris Stark has done a beautiful job of incorporating this story of cousins; Sher and Kristin, within a historical and cultural narrative. The trauma that they

experience is a familiar tale for many of us. I did not just read this story.... I felt this story and I journeyed with Sher and Kristin in all directions, and through many emotions. The connection to the story of Native women today is clear and brilliantly written. Chi miigwetch, Chris!" -- Nicole Matthews, ED of Minnesota Indian Women's Sexual Assault Coalition, White Earth Anishinaabe Learn more at [www.ChristineStark.com](http://www.ChristineStark.com) From Modern History Press

Night Flying Woman Jul 18 2022 In the accounts of the lives of several generations of Ojibway people in Minnesota is much information about their history and culture.
